Overview

In keeping with the City's focus to sustain and plan for Colleyville's long-term needs, the fiscal year 2025 budget includes the City's 5-Year comprehensive Capital Improvement Plan (CIP). This plan identifies planned projects for the next five years, based on funding availability, and a schedule for completion. Capital projects are defined as those projects requiring an investment of \$50,000 or more and that have a useful life of at least five years. The CIP provides an opportunity to consider all of the city's capital needs in the coming years and determine the priority of each, as well as whether available funding resources are sufficient to support those expenditures.

The Capital Projects Fund itself has no dedicated revenue source; any income received is from transfers from other funds, to set aside funding for capital projects that are often multi-year in nature and not appropriate for an annual operating budget. It is also the holding place for street impact fees, perimeter street fees, and other escrows until they are used for eligible purposes. Similarly, the Utility Capital Projects Fund (created in FY 2017) receives funding from transfers from surpluses from the Utility (operating) Fund and revenue from the Utility Capital Projects base rate on utility bills, for use on utility capital projects. It is also the holding place for water and wastewater impact fees, until they are used for eligible utility capital projects. The 5-Year CIP utilizes a variety of funding sources including the City's major operating funds, capital projects funds, special revenue funds, and other entities such as the state and regional grants.

Project descriptions also include information relating to any anticipated operating costs associated with the capital project, however, most capital projects do not require any new operating costs if they are primarily improvement to or replacement of already existing infrastructure.

Capital Revenue Sources and Strategy

The Capital Improvement Plan is simply that – a plan. As such, projects are subject to change based on new or shifting service needs, special financing opportunities, emergency needs, or other directives or priorities established by the Mayor and City Council. Because priorities can change, projects included in outward planning years are not guaranteed for funding. All budgets are constrained by available revenues. Capital projects are prioritized so that available funds are allocated based on need, Council priority, and their impact on service provision. The 5-year Capital Improvement Plan includes funding for a variety of City projects.

Pay as you Go – Capital Projects Fund, Capital Utility Fund, and Drainage Fund

Whenever possible, pay-as-you-go (“operating revenue” or “Transfer from --- Fund”) funding is the preferred method of funding CIP projects. These funds provide for a majority of the street maintenance projects as well as drainage and utility related projects.

Colleyville Economic Development Corporation (CEDC)

The Colleyville Economic Development Corporation (CEDC) is funded by a one-half cent sales tax approved by voters in 1996. The ballot language states that the sales tax will "provide for parks and park facilities, a library, a community center, open space improvements, and other facilities and improvements only as authorized by Section 4B of Article 5190.6" of the Local Government Code.

Impact Fees

Transportation, water, and wastewater impact fees are collected throughout the City. These impact fees can only be spent in the Service Area they were collected and/or the specific CIP project identified in the impact fee study.

Tax Increment Financing (TIF) District Fund

Projects included in the original and amended TIF plan are funded through this fund.

Third Party Partnerships

Funding for various improvements is provided by external sources or third parties. These work efforts are usually associated with individual projects and programs and are developed on a project/program basis. The City continues to aggressively pursue federal, state, and regional grant funding, and have been successful in many of these efforts.

Drainage

Drainage improvements are developed to optimize the performance and maintainability of the overall existing system. Projects are identified by utilizing the 2023 Storm Drainage Master Plan, staff recommendations, community input, and review by the Drainage Task Force. All projects requiring funding are reviewed and acted on by the City Council. Investments are made in: rehabilitating degraded open drainage channels to perform as designed and to facilitate ongoing maintenance; staff utilizes technology to inspect various aspects of the underground drainage system to ensure it is performing as designed; and by utilization of the work order system to track and identify recurring drainage problems so that an in-depth investigation can identify underlying causes and develop solutions.

Facilities

Staff is implementing a Facility Condition Assessment (FCA) approach for City owned facilities. The FCA is planned as a major assessment management tool to develop a comprehensive evaluation of the condition of each facility, as a means to work proactively on scheduled maintenance and repair, as well as assess short-term and long-term investment strategies.

Conducting an FCA involves the collection of data on the condition of each building or facility and categorizing the information into building system components, such as roofing or HVAC. Once the information is gathered for all locations, the evaluation for facility needs can be conducted on a systematic approach where objective determinations can be made based on clear priorities and benchmarks. Conducting an FCA also sets up a system for proactive preventative maintenance which can then alleviate the need for expensive capital replacement.

Information Technology

Funding to maintain and improve the City’s core information technology infrastructure in order to provide critical support services to all City departments. These services include systems analysis/design, computer hardware, application software, telecommunications, intranet/internet, and visioning for future technologies for the City. The computing environment is highly centralized leveraging a shared infrastructure. This takes advantage of economies of scale and efficiencies of resource consolidation to provide cost effective computing for departments. The major components include physical and virtualized servers, network area storage, switches, firewalls, VPNs, routers, internet connections, UPS, environmental controls, surveillance, telephone, audio, and visual equipment.

Master Plans/Studies (Systems, Operational, and Legislative Mandates)

Master Plans are developed to provide a road map for future facilities to be installed and/or updated generally within a 20-year timeframe. The City has several System Master Plans which provide guidance in prioritizing projects. These include the 2014 Water and Wastewater Master Plan, 2018 Parks, Recreation, and Open Space Master Plan, and the 2019 Storm Drainage Master Plan.

Studies are initiated to periodically review and update associated fees for water, wastewater, drainage and impact fees. Impact fee studies determine future projects and ensure the associated water, wastewater, and roadway impact fees are appropriate.

Parks and Recreation

The Colleyville 2018 Parks, Recreation, and Open Space Master Plan provides direction on program offerings, facility construction and management, general capital improvements, and park amenities. This plan is also intended to establish goals, objectives, policies, and standards to help guide the future development of the City’s parks, recreation, and open space system. Parks improvements are identified by the priorities established through the various boards, committee, and maintenance needs. All projects requiring funding are reviewed and approved by the City Council.

Sidewalks/Trails

Sidewalk/trail improvements encompass the installation of new sidewalk/trail segments, removal of obstructions along existing segments, and improvements to access ramps to ensure compliance with accessibility standards. Sidewalk/trail improvements are targeted to improve pedestrian mobility and access around schools, recreation areas, community centers, and other high pedestrian uses.

Streets

The Street Capital Improvement Strategy is driven by its mission to provide a safe and reliable street system for effective movement of people, goods and services. The CIP is developed from many sources within the City as well as exterior sources. These sources include:

- **Master Plans.** Master Plans are developed to provide a strategic plan for future infrastructure to be installed generally within a 20 plus year timeframe.
- **Collaboration with other Public Entities.** Ongoing collaboration with other public entities occurs such that transportation/street plans are coordinated and facilities integrated to create a seamless street system. Organizations include surrounding Cities, NCTCOG, TxDOT, and Tarrant County.
- **Corporate Priorities.** Street System improvements are provided in support of City Council- approved priority programs for the development of the City.
- **Legislative and Regulatory Mandates.** The Federal Government through the U.S. Department of Transportation (USDOT) and the Texas Legislature through the Texas Department of Transportation (TxDOT) regulate many standards for the design and operation of associated street components. Compliance with these regulations is typically related to traffic control signage, pavement markings, and various forms of traffic signals.
- **Condition Assessment and Maintenance History.** Staff routinely reviews the operation and maintenance records of the various elements of the Street System infrastructure for rehabilitation to extend the operating life of the asset and minimize maintenance costs by applying appropriate techniques at the most effective time intervals. These types of projects are identified through street assessment studies and the review of maintenance records to identify the appropriate rehabilitation or reconstruction technique that should be applied.
- **CIP Priority Criteria**
The Street System CIP is directly linked to the goals of: mobility, public safety, improving neighborhoods and communities, and retaining/encouraging economic growth. The specific goals and project prioritization are aligned with citywide strategic goals as reflected in the capital project prioritization system.

Reconstruction of failing streets, and application of various rehabilitation techniques to extend the life cycle of the street such as mill and overlays, overlays, joint/crack sealing, concrete panel/base failure repair, and asphalt sealing and resurfacing. Sub-categories within streets include the following:

- **Bridges:** These improvements include the rehabilitation and/or reconstruction of existing bridges where rehabilitation would not be cost effective. The City utilizes funding to partner with TxDOT and neighboring cities in the rehabilitation of bridge structures such that Federal Bridge monies are maximized. The Pleasant Run Bridge is complete and the Jackson Road Bridge is scheduled to be rehabilitated and/or reconstructed. Funding will be through grants and local match.
- **Intersection Improvements:** Safety and capacity improvements at existing intersections could include the construction of roundabouts, the addition of a right turn lanes, or signalization.
- **Pavement Markings:** Rehabilitation of existing pavement markings throughout the street system encompassing: lane lines, railroad crossings, crosswalks, and school zones.
- **School & Neighborhood Safety:** Rehabilitation and upgrading of existing school zones with new

signage, pavement markings, flashing beacons; and neighborhood speed awareness/warning devices to better manage travel speeds in residential areas.

- **Street Lighting:** Installation of new street lighting in unlighted areas and or rehabilitation of existing lighting systems including new lighting along the SH26 corridor.
- **Traffic Signals:** Installation of new traffic signals, system and communication network elements, and the rehabilitation of existing signals and system components.

Vehicles and Heavy Equipment

The City entered into an agreement with Enterprise Fleet Management, Inc. in 2019 for a managed vehicle program. The program established a proactive replacement plan that maximizes potential equity at the time of resale, reduces operations expenses, and increases safety. The City also maintains various pieces of heavy equipment. The Equipment Replacement Program is updated each year with each piece of equipment evaluated prior to being replaced to verify if it is at the end of its useful life.
